Problem-Solution Fit Canvas

Date	20 October 2026
Team ID	Individual project (no team)
Project Name	Personalized Travel Itinerary Planner
Maximum Marks	5 Marks

1. CUSTOMER SEGMENT(S) [CS]	6. CUSTOMER LIMITATIONS [CL]	5. AVAILABLE SOLUTIONS [AS]
Solo travellers, couples and small groups, mostly students and young professionals who plan trips online.	Limited budget, limited time, phone-first usage, little local knowledge, patchy internet while travelling.	Travel blogs, review sites, map apps (pros: detailed; cons: scattered, time-consuming, not personalised). Generic AI chat (pros: flexible; cons: no saving, no structure).
2. PROBLEMS / PAINS + FREQUENCY [PR]	**9. PROBLEM ROOT / CAUSE [RC]**	**7. BEHAVIOR + INTENSITY [BE]**
Hours of research for every trip; generic plans; unclear costs and travel times. Occurs with every trip, several times a year.	Information is spread across many sites and none of it adapts to a person's budget, pace and mood.	Compare many tabs, copy notes into docs, ask friends. High intensity right before a trip.
3. TRIGGERS TO ACT [TR]	**10. YOUR SOLUTION [SL]**	**8. CHANNELS OF BEHAVIOR [CH]**
A planned holiday, a long weekend, a friend's suggestion, a festival or leave coming up.	An AI web app that turns destination, days, budget, vibe and interests into a day-wise itinerary with timings, travel times and costs, and lets the user save and reopen trips.	ONLINE: search engines, travel blogs, social media, map apps. OFFLINE: friends and family advice, travel agents.
4. EMOTIONS BEFORE / AFTER [EM]		
BEFORE: overwhelmed, anxious about cost and time. AFTER: confident, organised, excited about the trip.
