Coding & Solution

Date	20 October 2026
Team ID	Individual project (no team)
Project Name	Personalized Travel Itinerary Planner
Maximum Marks	5 Marks

Summary of the implemented code and solution for the Personalized Travel Itinerary Planner.

Solution Summary

Repository Link / URL	https://github.com/niniwritescode/travel-itinerary-planner
Programming Language(s)	Python 3, JavaScript (JSX), SQL, CSS
Framework(s) Used	FastAPI, React 18, Vite; Supabase (PostgreSQL); Groq API
Key Features Implemented	Preference form; vibe-based personalisation; AI day-wise itinerary with timings, travel times and costs; destination suggestions; save, view and delete trips; copy as text; deployed on Render and Vercel.
Pending / Incomplete Features	User authentication; regenerate a single day; group / shared trips; destination photos (Unsplash).
Setup / Run Instructions	1) Create a Supabase project and run backend/schema.sql. 2) backend: pip install -r requirements.txt, copy .env.example to .env, add keys, run uvicorn main:app --reload. 3) frontend: npm install, copy .env.example to .env, run npm run dev. Full steps are in README.md.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organised into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments

Live application: https://travel-itinerary-planner-beryl.vercel.app
Backend API docs: https://travel-itinerary-planner-ce17.onrender.com/docs
API keys are stored only in environment variables; .env is excluded by .gitignore and only .env.example files are committed.
